

→ REACH 1907/2006/EC Regulation Article 33

According to REACH Regulation Article 33, we are obligated to notify you when a delivered product contains more than 0.1% of a substance from the SVHC candidate list for the approval process (<https://echa.europa.eu/de/candidate-list-table>). The reference value is the smallest product of a composite product.

Our fittings contain components made of lead-reduced red bronze material CC499K and lead-reduced brass material CW617N in accordance with current standards, which contain more than 0.1% of the material lead (EC number: 231-100-4, CAS number: 7439-92-1).

However, the named substances are permitted for contact with drinking water and approved by the German Federal Environmental Agency. As an alloying element, lead is permanently bonded, meaning no exposure can be expected, so no additional information on safe use is necessary.

Currently, there are no alternative substances available with a lead content of less than 0.1% that are approved in line with the Pressure Equipment Directive.

Please do not hesitate to contact us if you have any questions.
